

## History of Castelar

The school originally opened in 1882. This first building burned down in 1903, and the present large frame building was built in 1904.

The auditorium and main building was added in 1923, but torn down and rebuilt in 1955 because they wanted to make it safer in case of earthquake. The big frame building meets all the strict requirements for earthquake protection.

Both buildings now have fire-sprinkler protection, modern lighting, acoustic treatment, and electric clock and bell systems.
